SUMMARY

A Senior Software Engineer with a deep passion for leveraging technology to drive sustainability, equity, and long-term prosperity. With a diverse academic background shaped by international experiences in the USA and Australia, he holds a Bachelor of Computer Science and brings over eight years of hands-on experience delivering high-impact solutions for international clients. His work is focused on Ruby on Rails and React.js, complemented by a strong command of modern development practices and a proactive adoption of AI-assisted engineering tools to accelerate delivery, enhance code quality, and maintain high standards of reliability and maintainability.

EXPERIENCE

Sr. Software Engineer

SWARE

- 12/2024 - Present Los Angeles, United States
- Designed and implemented scalable backend features with Ruby on Rails, enabling seamless communication across business logic and third-party services.
- Led the development of React.js and Stimulus-based frontend components, improving user experience and application performance.
- Integrated external services like Google Address API and RingCentral to enable real-time and asynchronous operations.
- Engineered reliable webhook pipelines for consistent data synchronization across distributed systems.
- Promoted Agile practices to improve delivery cadence and team alignment, enhancing collaboration and output.
- Onboarded and mentored new engineers, accelerating team ramp-up through technical guidance and best practices.

Sr. Software Engineer

Sixfold AI

- 10/2023 - 12/2024 New York, United States (Remote)
- Designed and implemented robust APIs using Ruby on Rails, optimizing communication between Python-based AI server and React client platform while ensuring low latency and high reliability.
- Led the development of a responsive, user-friendly React-based frontend, incorporating dynamic AI-driven insights for real-time decision support for underwriters.
- Introduced modern software practices such as automated testing, continuous integration, and peer code reviews to enhance productivity and code quality.
- Engineered efficient data pipelines and utilized RESTful API design patterns to optimize performance, scalability, and secure exchange of information across platforms.
- Collaborated with data scientists and AI engineers to integrate generative AI models, delivering accurate insights and innovative features for improved decision-making tools.
- Enhanced codebase maintainability through clean code principles, modular architectures, and reusable components.
- Managed database architecture for over 50 projects utilizing Postgres and MongoDB, ensuring robust and scalable data management solutions.

EXPERIENCE

Sr. Software Engineer

Priceline Partner Solutions

📅 11/2021 - 10/2023 📍 Dallas, United States (Remote)

- Updated Ruby gems and JS libraries, and implemented security patches to ensure system security and compatibility, protecting platforms from vulnerabilities.
- Designed and implemented new features for room booking platforms with Ruby on Rails and React, enhancing user functionality and scalability.
- Worked with teams to translate requirements into technical solutions, improving functionality and scalability.
- Investigated and resolved bugs across platforms, ensuring optimal performance and improved user experience.
- Refactored Ruby on Rails code, improving readability, maintainability, and performance while reducing technical debt.
- Implemented and maintained React components within the Ruby on Rails architecture for a dynamic user interface.
- Optimized performance by maintaining critical C++ components and updating database queries within Rails projects.

Sr. Software Engineer

In All Media

📅 07/2020 - 11/2021 📍 United States of America (Remote)

- Led a team developing 15+ APIs for a major job board company, ensuring successful integration by coordinating tasks and overseeing implementation milestones.
- Developed an automated process for API integration, significantly reducing manual effort and minimizing errors.
- Standardized integration components to enhance consistency, reusability, and quality across all projects.
- Conducted extensive testing and validation of API integrations, ensuring data accuracy, seamless functionality, and compliance with external requirements.
- Provided technical guidance and mentorship to team members, fostering a collaborative environment to achieve project goals efficiently.

Software Engineer

Worldpackers

📅 07/2019 - 07/2020 📍 São Paulo, Brazil

- Contributed to the maintenance and development of new features for the web platform, ensuring it served a global community of nearly 1.7 million users
- Worked on improving the platform's usability, performance, and scalability while supporting the platform in English, Portuguese, and Spanish languages
- Developed and maintained backend features using Ruby on Rails (Rails MVC and Rails API) to support the web platform as well as the Android and iOS apps
- Utilized tools like NewRelic and Log DNA to monitor the health and performance of the platform, ensuring the application runs smoothly and efficiently at scale
- Identified and resolved performance bottlenecks, leveraging these services to improve response times and reduce downtime
- Worked with Cloudflare to manage traffic routing and ensure the platform's security, mitigating DDoS attacks, and improving overall availability
- Implemented additional security measures to safeguard user data and maintain a reliable, secure platform for the large user base

EXPERIENCE

Software Engineer

Welaborate

📅 02/2018 - 07/2019 📍 São Paulo, Brazil (Remote)

- Designed and developed a scalable RESTful API using Ruby on Rails, MongoDB, and Elasticsearch to optimize data management and enhance search functionality.
- Created efficient, scalable backend endpoints supporting user interactions, resource sharing, and project management.
- Contributed to front-end development with React.js for a seamless user experience and integrated with REST API for dynamic content rendering.
- Ensured robustness and reliability by writing unit and integration tests using RSpec, Jest, and Enzyme, improving code coverage.
- Explored blockchain for integration and strategized decentralized solutions despite funding cancellation.
- Engaged in startup training events and delivered multiple investor pitches to drive interest and secure potential funding.

EDUCATION

Bachelor of Computer Science

UFSCar

📅 01/2018 - 12/2018 📍 Location

Bachelor of Computer Science

RMIT University

📅 01/2016 - 12/2016 📍 Location

- University exchange in Bachelor of Computer Science and Business
